Photo Courtesy: The Good Brigade / DigitalVision / Getty Images Hepatitis is a condition that causes the inflammation of the tenderness. At present, it is estimated that there are 6 million people living with hepatitis in the United States, and more than 50,000 people are diagnosed with this disease every year. There are three primary types of hepatitis, and although their symptoms can be similar, they vary widely in forms as they are transmitted. Learning more about each type of hepatitis can help you better understand the condition as a whole. Hepatitis A is the most easily transmitted virus of the three. It affects approximately 2,500 people every year in the United States of America. It spreads normally through food or water contaminated with stools and lies in the feces of people who have the vary. Hepatitis causes acute and short-term disease from which most people heal untreated. However, it can cause serious diseases in some people. This virus is more common in places with underdeveloped sanitation systems. While the physicians can treat hepatitis A with medicines, people who contract this virrup can manage their symptoms with fluids, rest and good nutrition. There is also a safe and effective vaccine to protect it against hepatitis A. What is hepatitis B? Hepatitis B can occur both acute (which means that it develops quickly and lasts shortly) as a chronic (which means it develops slowly over time and aggravated over months or years). According to the control and prevention centers of diseases, until 2 million people in the United States are chronically affected with hepatitis B. Hepatitis B can be transmitted through sexual activity and exhibition infected blood. It can also be passed from a parent to his newborn child during birth. Hepatitis B usually causes a short-term discomfort of which many people completely recover about four to eight However, it can become a chronic condition that lasts years; This is © most likely in older adults. The mom's © dices can treat severely hepatitis B with antiviral medicines. However, in most cases, treatments focus on proper hydration and nutrition. There © also a safe vaccine available to protect you against hepatitis B. What © hepatitis C? Photo Courtesy: BSI/Getty Images Approximately 4 million people in the United States are affected by hepatitis C. This form of hepatitis causes a chronic cause in more than 50% of people who contract this type of virus. It is the least transmissible of three video and can spread through © contact with infected blood. Hepatitis C occurs most often in people who are engaged in intravenous drug use. If you received a blood transfusion before 1992, you should© also be tested for hepatitis C if you have previously tested. Hepatitis C can spread through© sexual relations without protection, but this is a less common © of transmitting it. Although there is no vaccine for chronic hepatitis C, treatments available today offer a 95% cure rate. Chronic hepatitis C can significantly affect how your liver works. It can cause cirrhosis, which means that your normal heatic tissue is © replaced by scar tissue. It © also cause cancer of the cancer. However, there are medicines that can help keep this disease under control. Making lifestyle changes, such as reducing or eliminating alcohol from your diet, can© also decrease your chances of suffering complications. In severe cases, hepatitis C may require a drug transplant. The different forms of viral hepatitis affect millions of people in the United States. Chronic hepatitis often has few symptoms in its early stages, so recognizing the associated dangers and being tested if you have been exposed can save your life. Although there are five types of viral hepatitis, only A, B and C are the forms commonly found in the United States. Resource links:ÀcHepatitis A, B, and Learn the differences, is an immunization action coalition © What is the difference between hepatitis A, B and CÀ e?, À © UNC HEALTH TALKÀ © Centers Control and prevention of disease - "What is the difference: hepatitis B vs hepatitis C? If you are infected with hepatitis C, this does not mean that you can not have children. À © à © " Sinai, New York and member of the American Foundation Membership Committee of the American Foundation, assuming that you have no HIV and have a uncomplicated delivery. "We are really contemplating the treatment of gravy women [who have Hep C] in the last two months [pregnancy], so we only give them eight weeks of treatment [during] months eight and nine [of pregnancy] À © à -, he adds, which can help cure hepatitis C before delivery to help prevent transmission for the baby. More and more women under 30 are being infected with Virus Hep C , due to an increase in the transmission of drug use IV in this etherary range. À © à © "It is much more serious women now with hepatitis C À © à ©" Says Dietrich, than in the past. If you want to be displayed for hepatitis C, you have to ask for it. Regular blood work Pranatal À © à © "Says Dr. Jennifer Ashton, the corresponding head-of-chief for ABC News. You are part - "Hepatitis C is not. The test is left to the discretion of your doctor, unless you specify a screen of Hep C. If you had children before 1992 and you had HR incompatibility with your baby, and received a product of HR Immunoglobulin, as Rhogam, you may also want to be displayed for Hep C. That is because, before 1992, the blood supply has not been tested for Hep C, and treatment for incompatibility RH is a sanguine product given to help prevent fought outside the fetus like a foreign invader. So there's one that Rhogam administered before 1992 carries a risk of Hep C À © à - "for you and your baby,who said: Today, if you have an incompatibility with your baby, it should not be a problem, as the blood products are now selected for the video. Virus.
